PLANNING AND DEVELOPMENT

FILE: 77000 05

SUBJECT: HERITAGE REVITALIZATION AGREEMENT/HERITAGE
DESIGNATION BYLAW, ALICE AND ROBERT TRAVERS RESIDENCE,
7828 STANLEY STREET

PURPOSE: To seek Council authorization to prepare a Heritage Designation Bylaw and Heritage Revitalization Agreement Bylaw to provide for the retention of the Alice and Robert Travers Residence.

RECOMMENDATION:

1. **THAT** the Community Heritage Commission receive this report and forward it to Council with the following recommendations:
 - a. **THAT** Council authorize the preparation of a Heritage Revitalization Agreement Bylaw to provide for the retention and protection of the Alice and Robert Travers Residence.
 - b. **THAT** Council authorize the preparation of a Heritage Designation Bylaw to designate the Alice and Robert Travers Residence as a protected heritage site.
 - c. **THAT** Council authorize that the Heritage Revitalization Agreement and Heritage Designation Bylaw be forwarded to a public hearing at a future date.
 - d. **THAT** Council approve the listing of the Alice and Robert Travers Residence on the Burnaby Community Heritage Register as a protected heritage property.

REPORT**1.0 BACKGROUND**

The Planning and Development Department received an enquiry from the owner of 7828 Stanley Street regarding development options for this existing R2 Residential District property. At present, the property is occupied by a residence identified on the City's heritage inventory. Under the current zoning, the owner can demolish the existing house and construct a new single family dwelling on the property in accordance with the prevailing R2 zoning regulations (see *Attachment #1*).

To: *Community Heritage Commission*
From: *General Manager Planning and Development*
Re: *Heritage Revitalization Agreement/Heritage Designation Bylaw,
Alice And Robert Travers Residence, 7828 Stanley Street*
2023 January 19..... Page 2

In consideration of the City's Heritage Program and the owner's desire to retain and protect this historic and architecturally significant house as a designated City heritage site, the Planning and Development Department has worked with the owner to develop a suitable proposal for the property utilizing a Heritage Revitalization Agreement. The proposal would allow for the creation of two lots: Lot B would provide for the retention, conservation and designation by bylaw of the existing Alice and Robert Travers Residence fronting Stanley Street; Lot A would provide for a new single-family dwelling, also fronting Stanley Street.

2.0 POLICY CONTEXT

The proposal to protect and designate the Alice and Robert Travers Residence aligns with the following Council-adopted policies, plans, and strategies: *Corporate Strategic Plan (2022)*, and *Burnaby's Official Community Plan (1998)*, specifically Heritage Policy 12.4.4.

3.0 HERITAGE DESIGNATION

3.1 Local Government – Heritage Designation Bylaw Process

Under the terms of the *Local Government Act*, provision is made for the designation by bylaw of property that " has heritage value or character " (Section 611). The purpose of the proposed designation bylaw is to protect the heritage values of the Alice and Robert Travers residence.

Section 612 of the *Local Government Act* specifies the formal procedures of the designation process, which includes a public hearing, notification of occupants and all persons with a registered interest in the property, publication of newspaper notices, and preparation of a report. The report is to be made available to the public, and is to address: the heritage character of the property; the compatibility of conservation with the official community plan and other community planning objectives; the compatibility of conservation with lawful uses of the property and adjoining lands; the condition and economic viability of the property; and, the possible need for financial or other support to enable conservation. The City is required to give notice of the completed bylaw to the Land Title Office and to the owners.

3.1.1 Heritage Character Statement

The landmark heritage home located at 7828 Stanley Street in the Burnaby Lake historic neighbourhood was identified as the "Arthur Long Residence" on Burnaby's heritage inventory when it was published in 2007. Arthur Long was the first registered owner of 7828 Stanley Street, but the residence was constructed for later owners Alice and Robert Travers who lived in the house from 1914 to circa 1940.

This two-storey, wood frame building with a cellar was designed by architect Robert Mackay Fripp, and is one of a handful of extant and confirmed Fripp-designed buildings in the City of Burnaby. Other Burnaby buildings confirmed to have been designed by Fripp include the 1912 Ramsay Residence at 7864 Stanley Street (two houses down from 7828 Stanley Street) and the Fairacres buildings at 6344 Deer Lake Avenue that include the Mansion (now Burnaby Art Gallery), as well as the Chauffeur's Cottage, the Garage & Stables, the Root House, and the Steam Plant.

To: *Community Heritage Commission*
From: *General Manager Planning and Development*
Re: *Heritage Revitalization Agreement/Heritage Designation Bylaw,
Alice And Robert Travers Residence, 7828 Stanley Street*
2023 January 19..... Page 3

Fripp was an exceptional architect who followed the British Arts & Crafts movement. The house reflects the Arts & Crafts architectural style with its use of local materials (such as cedar), horizontal clapboard siding with roughcast stucco in the gable ends and on upper bump-outs, and deep overhanging eaves with wooden triangular support brackets. A copy of the Heritage Conservation Plan prepared for the site is included as *Attachment #2*.

3.1.2 Compatibility of Conservation with Community Plan and Adjoining Land Use

The conservation of this heritage house is considered compatible within its well-developed neighbourhood context of predominantly single family dwellings. The retention, conservation and designation of this house through bylaw will add another significant heritage building to the City's list of protected heritage resources.

The Alice and Robert Travers Residence is a significant landmark in the historic Burnaby Lake neighborhood and its preservation provides a good opportunity to retain and interpret the early history and heritage of Burnaby.

3.1.3 Condition and Economic Viability of the Property

The Alice and Robert Travers Residence has been well-maintained and remains in good condition. Very few changes have been made to the house over the years, and many of the original features remain intact.

The revitalization project will include retaining the house in its current location and constructing a front porch to reflect the original porch that was removed from the house sometime after 1921. As part of the Heritage Revitalization Agreement, variances to the *Zoning Bylaw* will be provided to permit future development of the existing cellar to a full height basement, and construction of two small additions to the rear of the house and a single-vehicle garage in the side yard setback on the north-east side of the lot.

The economic viability of the property is considered secure given that the Heritage Revitalization Agreement provides the owner the opportunity to create a new single family lot and would provide sufficient financial incentive to retain and restore the existing heritage house.

3.1.4 Possible Need for Financial Support to Enable Conservation

The building will continue to be owned as a private dwelling and maintained accordingly. The adoption of the Heritage Revitalization Agreement by Council will allow for subdivision utilizing the provisions of the R2 District to create two lots through variances to the *Zoning Bylaw*. The provision of an additional lot would assist the property owner with additional revenue in order to preserve and restore the heritage building. There are no additional economic incentives that would be required to ensure its continued protection and conservation. Staff would continue to work in cooperation with the current and future owners of the property to ensure that the heritage character of this City heritage site is protected and conserved.

Alice And Robert Travers Residence, 7828 Stanley Street
2023 January 19..... Page 4

4.0 HERITAGE REVITALIZATION AGREEMENT

4.1 Local Government Act – Heritage Revitalization Agreement Process

A Heritage Revitalization Agreement (HRA) is a written agreement between a local government and private property owner and provides the authority under the *Local Government Act* to vary or supplement provisions of a bylaw concerning land use designation and subdivision. A local government must hold a Public Hearing on the matter before entering into a Heritage Revitalization Agreement if it would permit a change to use or density that is not otherwise authorized by the existing zoning of the property.

The purpose of this HRA is to provide for the long-term protection and conservation of the Alice and Robert Travers Residence. The current owner of the property wishes to ensure that this heritage house is protected by the City of Burnaby as a City heritage site. The City's Official Community Plan statement concerning the conservation of heritage has specifically outlined the need to establish incentives to encourage the conservation and retention of significant privately-owned heritage buildings.

It is proposed that the City enter into a HRA to provide necessary zoning variances to allow for the subdivision and development of the existing R2 Residential District property in order to retain and protect the landmark Alice and Robert Travers Residence as a City heritage site. As the proposed HRA for the property will provide for variances to its R2 zoning to accommodate the creation of an additional lot and increase the density for the heritage house above the maximum Above Ground Floor Area permitted under the Zoning Bylaw, a Public Hearing is required (see *Attachment #3*).

4.2 Proposed Heritage Revitalization Agreement

The proposed HRA would allow for the creation of two lots: Lot B would provide for the retention, conservation and designation by bylaw of the existing Alice and Robert Travers Residence fronting Stanley Street; Lot A would provide for a new single-family dwelling, also fronting Stanley Street. As noted above, the subject property is zoned R2 Residential District. The *Zoning Bylaw* states that each new lot created in the R2 Zoning District shall have an area of not less than 668.88 m² (7,200 sq. ft.) and a width of not less than 18.28 m (60.0 ft.). This proposal would require a variance to the *Zoning Bylaw* to permit a reduced lot width of 12.09 m (39.67 ft.) and a reduced lot area of 406.15 m² (4,371.77 sq. ft.) for Lot A. It also proposes a variance of 0.5m (1.64 ft) to the minimum front yard setback for Lot A. These variances would permit a residence with up to 211.23m² (2,273.66 sq. ft.) of Above Ground Floor Area to be achieved on proposed Lot A. The resulting development would be compatible with nearby lots and with the character of the neighbourhood.

The specific plan of development for both lots will also require a number of *Zoning Bylaw* variances. These variances are outlined in *Section 5.0* below.

The Alice and Robert Travers Residence is in excellent condition with much of its original character elements in place. It has retained much of its original form, scale, and massing, most of its original windows, and its original cladding and trim. Despite the removal of its original front porch sometime after 1921, the front façade of the house has retained much of its original character and is a highly visible landmark on Stanley Street.

To: *Community Heritage Commission*
From: *General Manager Planning and Development*
Re: *Heritage Revitalization Agreement/Heritage Designation Bylaw,
Alice And Robert Travers Residence, 7828 Stanley Street*
2023 January 19..... Page 5

The proposed HRA will require retention of the home's exterior elements as outlined in the Heritage Conservation Plan (*Attachment #2*). The owners will undertake work to replicate the original porch and add a new porch roof to reflect the original design. As there are no photographic or architectural plans that record the complete design of the porch, the design will draw on other examples of Fripp's work and take cues from the existing house to create a porch that is sympathetic to the architecture of the house.

In order to achieve a new lot on the south-west side of the property of sufficient size to permit construction of a home compatible with the neighbourhood character, alterations will be required to the heritage house to remove up to two original windows from the west face. The removal of the windows is needed to comply with BC Building Code requirements for spatial separation between buildings, specifically walls with facing windows. While this reduction of glazing on the west building face removes an original heritage element, it is necessary to achieve the required spatial separation to achieve a reasonable sized new lot. The west face of the building has a relatively low level of visibility which will be reduced further with construction of a new residence on proposed Lot A.

In consideration of the City's Heritage Program, it has been deemed desirable to retain and protect the Alice and Robert Travers Residence as a designated City heritage site. The proposal is for the creation of two single-family lots based on the provisions of the existing R2 District, and the use of an HRA to vary provisions of the *Zoning Bylaw* with regards to lot area, lot width, height, setbacks, density, and siting, as outlined in *Section 5.0* below. The subdivision would be based on the layout as shown in *Attachment #3*, and all other *Zoning Bylaw*, BC Building Code and other City regulations and requirements would continue to apply.

5.0 DEVELOPMENT PROPOSAL

5.1 Proposed Lot B (Existing Heritage House)

The applicant proposes that the existing heritage house be retained on Lot B, and designated as a City heritage site through adoption of a Heritage Designation Bylaw. The exterior of the heritage house will be restored as outlined in the *attached* Heritage Conservation Plan and shall include re-instatement of a covered front porch.

The proposed Lot B meets the lot area and lot width requirements of the *Zoning Bylaw*; however, the proposed development would require the following variances, which would be granted through the HRA:

- (i) The proposed maximum Above Grade Floor Area (AGFA) permitted for the heritage house is 440 m² (4,736.12 sq ft), which exceeds the maximum AGFA permitted under the *Zoning Bylaw* by 138.84 m² (1,494.46 sq ft). This variance permits the retention of the existing floorplan of the home with the addition of up to 100 m² for future development of a full height basement to replace the existing cellar, and to add two small additions totaling a maximum of 15.0m² (161.46 sq. ft.) to the rear of the house to include an addition to the existing kitchen.
- (ii) The proposed height of the heritage house on Proposed Lot B is 3 storeys and 9.75 m (32 ft.), which provides for the house to be raised over a new foundation in the future to accommodate a full height basement. The proposed height exceeds the maximum height permitted under the *Zoning Bylaw* by 0.75 m (2.46 ft).

To: *Community Heritage Commission*
From: *General Manager Planning and Development*
Re: *Heritage Revitalization Agreement/Heritage Designation Bylaw,
Alice And Robert Travers Residence, 7828 Stanley Street*
2023 January 19..... Page 6

- (iii) The heritage house currently has a front yard setback of 9.42m (30.9 ft.), which is 0.37m (1.21 ft.) smaller than the minimum required under the *Zoning Bylaw*, based on front yard averaging. The non-conforming front yard setback of 9.42m would be retained through a variance included in the proposed HRA.
- (iv) The front verandah would be permitted to encroach into the front yard setback by approximately 2.06 m (6.76 ft.). This would exceed the 1.2 m (3.94 ft.) maximum encroachment permitted under the *Zoning Bylaw* by 0.86 m (2.82 ft.).
- (v) The proposed lot coverage is 216 m² (2,325 sq. ft.), which exceeds what is permitted under the *Zoning Bylaw* by 85.16 m² (916.65 sq. ft.). The increased lot coverage is largely a result of the proposed subdivision, and includes the existing footprint of the heritage house with the addition of two small additions totaling 14.9 m² (160.38 sq. ft.), the 28.5 m² (306.77 sq. ft.) covered porch, and the 24.4 m² (262.64 sq. ft.) single car garage.
- (vi) Enabling future construction of a single car garage requires variances to the *Zoning Bylaw* permitting the siting of a garage in the side yard setback on the north east side of the property. The proposed garage would be sited a minimum of 0.67 m (2.20 ft.) from the property line and 1.22 m (4 ft.) from the heritage house.

A Section 219 restrictive covenant will be registered on the property's land title outlining the provisions of the Heritage Revitalization Agreement.

5.2 Proposed Lot A (New Residence)

The applicant proposes development of a new lot on the south-west side of the property to be created under the HRA through variances to lot size and lot area. The proposed building footprint could accommodate a residence with an AGFA of up to 211.23m² (2,273.66 sq. ft.) of Above Grade Floor Area with a 127.13m² (1,368.42 sq. ft) cellar that could accommodate a secondary suite and garage space sufficient to provide two independent parking stalls. Specific variances required include:

- (i) Lot A would require a variance to permit a reduced lot width of 12.09 m (39.67 ft.), which is 6.19 m (20.31 ft.) less than the minimum permitted in the R2 Zoning District.
- (ii) Lot A would require a variance to permit a lot area of 406.15m² (4,371.22 sq. ft.), which is 262.73 m² (2,828 sq. ft.) less than what is permitted in the R2 Zoning District.
- (iii) Lot A would be permitted a front yard setback of 9.8m (32.15 ft.).. This setback is 0.5m (1.64 ft) less than the minimum setback of 10.3m that would be required under the *Zoning Bylaw* based on an average of the existing front yard setbacks of abutting properties.

As with Lot B, a Section 219 restrictive covenant will be registered on this property outlining the terms of the Heritage Revitalization Agreement.

6.0 CONCLUSION

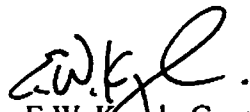

The protection of the Alice and Robert Travers Residence through a Heritage Designation Bylaw and Heritage Revitalization Agreement offers the City of Burnaby an opportunity to protect and revitalize a significant heritage building in the Burnaby Lake neighborhood and an important City heritage resource.

To: *Community Heritage Commission*
From: *General Manager Planning and Development*
Re: *Heritage Revitalization Agreement/Heritage Designation Bylaw,
Alice And Robert Travers Residence, 7828 Stanley Street*
2023 January 19..... Page 7

The proposed Heritage Revitalization Agreement conforms with the use and development of the R2 zone with variances to lot area, lot width, height, setbacks, density, and siting for the heritage house on Lot B, and to the lot width and lot area for the proposed new Lot A.

Utilizing the opportunity presented by the current proposal to achieve heritage designation of the Alice and Robert Travers Residence through an HRA will ensure the long-term protection of this heritage house.

This project is guided by the Official Community Plan objective to protect the City's significant cultural heritage resources. The Heritage Revitalization Agreement presented in this report provides a suitable plan for public review and consideration at this time. With Council approval of the recommendations of this report, the subject bylaws would be prepared and advanced to Public Hearing at a future date.

1.0 Introduction

The subject building, called the Arthur Long Residence, is located at 7828 Stanley Street in Burnaby, BC. If approved by Council, a Heritage Revitalization Agreement would allow the existing lot to be subdivided into two and a new house eventually constructed on the new lot. The historic house would retain its current location and orientation and would have its original front porch replicated. It would be given long term legal protection through the Heritage Revitalization Agreement.

2.0 Report Scope

The intent of this Heritage Conservation Plan is to provide guidance for the exterior restoration of the house in a way that responds respectfully to the “Standards and Guidelines for the Conservation of Historic Places in Canada”¹ (*Standards and Guidelines*). A detailed approach to the possible restoration, repair and/or replacement of each character defining element is provided, as well as a general maintenance schedule.

A Heritage Conservation Plan also includes a Statement of Significance (SOS), which describes why the building has heritage significance. An SOS is a values-based assessment that considers any aesthetic, cultural, historic, scientific, social and/or spiritual importance of a place. It also identifies the specific elements of the building (called character-defining elements) that should be retained in order for the heritage significance to remain.

A site visit was conducted in January 2021. The building was visually assessed and photographed, and the general condition of the building and the overall project were discussed.

Photographs included in this report are by the report author unless otherwise indicated.

¹ The *Standards and Guidelines for the Conservation of Historic Places in Canada* is a consistent, pan-Canadian set of conservation principles and guidelines that provides sound, practical guidance to achieve good conservation practice. *The Standards and Guidelines for the Conservation of Historic Places in Canada*, Second Edition, 2010 www.historicplaces.ca

3.0 Definitions

The heritage conservation approach to an historic place first requires an understanding of why that place is important. As part of this understanding, there are some key definitions, taken from the *Standards and Guidelines*, that are helpful to know, and which are used in this report.

Conservation: all actions or processes that are aimed at safeguarding the character-defining elements of an historic place so as to retain its heritage value and extend its physical life. This may involve Preservation, Rehabilitation, Restoration, or a combination of these actions or processes.

Preservation: the action or process of protecting, maintaining, and/or stabilizing the existing materials, form, and integrity of an historic place, or of an individual component, while protecting its heritage value.

Rehabilitation: the action or process of making possible a continuing or compatible contemporary use of an historic place, or an individual component, while protecting its heritage value.

Restoration: the action or process of accurately revealing, recovering or representing the state of an historic place, or of an individual component, as it appeared at a particular period in its history, while protecting its heritage value.

Replication: the action of copying exactly a particular element or building and replacing the original with it (this action is not defined in the *Standards and Guidelines* but is included here as this action may form part of the work carried out on this building).

Historic Place: a structure, building, group of buildings, district, landscape, archaeological site or other place in Canada that has been formally recognized for its heritage value.

Heritage Conservation Plan: a document that provides direction in the heritage conservation of a place, with guidance on specific elements of the place - often forms part of the legal documentation for a Heritage Revitalization Agreement.

Statement of Significance: a statement that describes the historic place and that identifies the heritage value and character-defining elements of the historic place.

Character-defining Element: the materials, forms, location, spatial configurations, uses and cultural associations or meanings that contribute to the heritage value of an historic place, which must be retained to preserve its heritage value.

Heritage Value: the aesthetic, historic, scientific, cultural, social or spiritual importance or significance for past, present and future generations. The heritage value of an historic place is embodied in its character-defining materials, forms, location, spatial configurations, uses and cultural associations or meanings.

The following definitions of heritage value are quoted directly from the guide “Canadian Register of Historic Places: Writing Statements of Significance”.²

Aesthetic value refers to the sensory qualities of a historic place (seeing, hearing, touching, smelling and tasting) in the context of broader categories of design and tradition. A place may have aesthetic significance because it evokes a positive sensory response, or because it epitomizes a defined architectural style or landscape concept. Visual aesthetic value is typically expressed through form, colour, texture or materials. It is possible for historic places to have other aesthetic values as well, such as auditory ones. Historic places with aesthetic significance may reflect a particular style or period of construction or craftsmanship, or represent the work of a well-known architect, planner, engineer or builder.

Historical and Cultural values are sometimes combined and refer to the associations that a place has with past events and historical themes, as well as its capacity to evoke a way of life or a memory of the past. Historical or cultural value may lie in the age of a heritage district, its association with important events, activities, people or traditions; its role in the development of a community, region, province, territory or nation; or its patterns of use. Historical or cultural value can lie in natural or ecological features of the place, as well as in built features.

Scientific value refers to the capacity of a historic place to provide evidence that can advance our understanding and appreciation of a culture. The evidence is found in the form, materials, design and/or experience of the place. Scientific value can derive from various factors, such as age, quality, completeness, complexity or rarity. Scientific value may also be present when the place itself supplements other types of evidence such as written sources, as in archaeological sites.

Social value considers the meanings attached to a place by a community in the present time. It differs from historical or cultural value in that the value may not have an obvious basis in history or tradition and relates almost entirely to the present time. Social value may be ascribed to places that perform a key role within communities, support community activities or traditions, or contribute to the community’s sense of identity. Places with social value include sites that bring the community together and create a sense of shared identity and belonging.

Spiritual value is ascribed to places with religious or spiritual meanings for a community or a group of people. Sacred and spiritual places could include places of mythological significance, landscape features associated with myth and legends, burial sites, rock cairns and alignments, fasting/vision quest sites etc., places representing particular belief system(s) or places associated with sacred traditions, ceremonial practices or rituals of a community/group of people.

² Historic Places Program Branch, “Canadian Register of Historic Places: Writing Statements of Significance,” Parks Canada, November 2006, pp. 12-13.

4.0 Location and Site Context

The subject property (identified on the map below with a red rectangle) is located in the Burnaby Lake neighbourhood of Burnaby, British Columbia.

The property is almost square in shape: 34.5m x 33.58m for a total area of 1,158.52 square metres. It is steeply sloped from back to front and the house sits on the eastern side and in the back half of the property. Its setback is similar to its neighbours. The area is single-family residential with houses varying in size from modest to large.

The property is not protected with a Heritage Designation or any other heritage Bylaw, but it is listed on the Burnaby Heritage Inventory.

5.0 Policy Context

Official Community Plan and Zoning

Official Community Plan

The City of Burnaby is committed to the principles of heritage conservation, as can be seen in their Official Community Plan (OCP). Heritage goals and policy directions are set out in Chapter 12 of the OCP. Of particular relevance to this application is the following statement:

“The need to establish a program of incentives to encourage the conservation of significant heritage buildings has been identified in the Heritage Strategy report as being important to the promotion of the conservation of heritage resources owned by private groups and individuals. The ultimate goal of this action is to encourage and facilitate the retention of private sites for the benefit of the community and the owner.”³

The Heritage Policy Framework in the OCP identifies the importance of:

- The continued promotion of conservation and stewardship of City-owned heritage properties;
- The continued recognition of the value of increasing public awareness about heritage issues;
- The promotion of a recognition and understanding of heritage resources within the community;
- The identification of opportunities to pursue heritage objectives offered by Provincial programs, legislation and financial incentives;
- The ongoing preparation of a detailed Heritage Register to identify and manage Burnaby’s heritage resources; and
- The recognition that Burnaby’s heritage resources should be managed in the context of the community planning process.

This application meets the above objectives.

Zoning

The property is zoned Residential District (R2), the purpose of which is to “provide for medium density urban-type residential areas”⁴.

Please refer to the City of Burnaby for more detailed information on the specifics of this zone and the expectations associated with it.

6.0 Statement of Significance

The following Statement of Significance was completed by Schueck Heritage Consulting in February 2021. Given the situation with the pandemic, in-person research was not possible. The result is that the level of research is not as high as it normally would be, but it should be suitable for this report.

Description:

The Arthur Long Residence is located at 7828 Stanley Street in Burnaby, British Columbia. It is a two-storey, wood-frame building with a cross-gable roof and dormers on the front and back elevations. The house is multi-planed on each façade and is primarily clad in horizontal wood clapboard siding, with rough stucco in the gable ends. The windows, many of which are triple-sash, are wood frame.

Heritage Values:

Constructed in circa 1914, the house has heritage value primarily for being a house designed by architect Robert Mackay Fripp, for its Arts & Crafts style, and for its connection to the Long, Travers and Ramsay families.

Aesthetic: The house has high aesthetic value for the integrity and excellence of its Arts & Crafts style, for the use of local materials (such as cedar), and for its unified composition that is symmetrical and picturesque. It is a grand house that sits high above the street in a beautifully landscaped yard.

Historic and Cultural: The house has superior historic value for being designed by architect Robert Mackay Fripp in 1914. Previously unknown as a Fripp-designed house, it is one of a handful of extant and confirmed Fripp-designed buildings in the City of Burnaby. These are: the subject house at 7828 Stanley Street in 1914, the Ramsay Residence (two houses down) at 7864 Stanley Street in 1912, and the Fairacres Estate buildings in Deer Lake that include the Mansion (now the Burnaby Art Gallery) as well as the Chauffeur's Cottage, the Stables/Garage, the Root House, and the Steam Plant, all in 1910.

Fripp was a superb architect who followed the British Arts & Crafts movement in all architectural, crafts and societal aspects. He designed numerous buildings in British Columbia, California, England and New Zealand, wrote articles and gave lectures espousing the Arts & Crafts ideology, and was a founding member of the Architectural Institute of British Columbia.

There is cultural value for its association to the original owner of the property, Arthur Long, after whom the house is named. Arthur Long worked in the Water Rights Office in Victoria. He did not, however, have the house designed or built, as has been the assumption until now. It was actually Robert Damer Travers (1878-1963) and his wife Alice (1880-1970 nee Bagnell) who hired Fripp and had the house built in 1914. Robert and Alice came to Canada from Ireland, first settling in Alberta before moving to Burnaby. Robert was a real estate agent for 40 years. The Travers family has high cultural significance for their early and long association with the house.

Scientific Value: There is scientific value associated with the house as it provides information that helps people understand and appreciate the era in which it was built, as well as the people and neighbourhood associated with it.

Social Value: The house has social value for its connection to the community today and the way it contributes to the community's sense of identity by providing architectural stability to the neighbourhood.

Spiritual Value: There is no specific information of sacred or spiritual value being associated with the subject house or property⁵.

Character-defining Elements

Key elements that define the heritage character of the house include:

- Location on and how its front façade faces Stanley Street.
- The form, scale and massing as expressed by its:
 - o Two-storey height
 - o Steeply-pitched, cross-gable roof with dormers on the front and back elevations
 - o Multi-planed façades with projecting bays
- Its Arts & Crafts design and architectural elements such as the:
 - o Horizontal wood clapboard siding, with roughcast stucco in the gable ends and on the upper bump-outs
 - o The flare at the bottom of certain corners of the house
 - o Wooden triangular brackets supporting the roof eaves
 - o Crown moldings and friezes
 - o Deep overhanging eaves
 - o Bump-outs and projecting bays
- Location and fenestration pattern of window openings, including a series of triple sash windows on the front and side elevations, all with wood frames and casings
- Two internal brick chimneys

⁵ To determine if there is sacred and/or spiritual value as it relates to local Indigenous culture, consultation with the local First Nations people would be required.

8.0 Conservation Plan

8.1 Heritage Conservation Standards

The work on the historic house will ideally follow the “Standards and Guidelines for the Conservation of Historic Places in Canada” (*Standards and Guidelines*), developed by Parks Canada as a pan-Canadian approach to heritage conservation. A copy of this document can be found on-line at: www.historicplaces.ca.

There are three main approaches to heritage conservation which can be applied to the place as a whole and to its individual elements. These are defined in the *Standards and Guidelines* as follows, and while they have been defined above, are worth repeating:

Preservation: the action or process of protecting, maintaining, and/or stabilizing the existing materials, form, and integrity of an historic place, or of an individual component, while protecting its heritage value.

Restoration: the action or process of accurately revealing, recovering or representing the state of an historic place, or of an individual component, as it appeared at a particular period in its history, while protecting its heritage value.

Rehabilitation: the action or process of making possible a continuing or compatible contemporary use of an historic place, or an individual component, while protecting its heritage value.

8.2 General Guidance

The intention of this proposal is that the historic house on this property will be retained and restored.

The *Standards and Guidelines* offer general guidelines with regard to the preservation, rehabilitation and restoration of an historic building and all (even those that are not relevant to this proposal) are provided here in order to help inform the level of retention of the historic house. The author’s comments are provided in italics where relevant.

- 1) Understand the exterior form and how it contributes to the heritage value of the historic building. - *Included in the Heritage Conservation Plan.*
- 2) Understand the design principles used by the original designer or builder, and any changes made to the exterior form over time. - *Included in the Heritage Conservation Plan.*
- 3) Document the building’s exterior form before undertaking an intervention, including the form and massing, and viewsapes, sunlight and natural ventilation patterns. - *Included in the Heritage Conservation Plan.*
- 4) Assess the condition of the building’s exterior form early in the planning process so that the scope of work is based on current conditions. - *Completed as part of the early process of the project development and as part of the Heritage Conservation Plan.*

- 5) Protect and maintain elements of the building's exterior form through cyclical or seasonal maintenance work. - *Suggestions provided in the Heritage Conservation Plan.*
- 6) Retain the exterior form by maintaining proportions, colour and massing, and the spatial relationships with adjacent buildings. – *Suggestions provided in the Heritage Conservation Plan.*
- 7) Stabilize deteriorated elements of the exterior form by using structural reinforcement and weather protection, or correcting unsafe conditions, as required, until repair work is undertaken.
- 8) Protect adjacent character-defining elements from accidental damage or exposure to damaging materials during maintenance or repair work.
- 9) Document all interventions that affect the exterior form and ensure that the documentation is available to those responsible for future interventions. - *Suggest providing the architectural plans and this Heritage Conservation Plan to the Community Archives.*
- 10) Reinststate the exterior form by recreating missing or revealing obscured parts to re-establish character-defining proportions and massing. – *The front porch will be reconstructed to as close as the original as possible, based on the evidence at hand.*
- 11) Accommodate new functions and services in non-character defining interior spaces as an alternative to constructing a new addition.
- 12) Select a new use that suits the existing building form. - *The historic use as a family home will continue.*
- 13) Select the location for a new addition that ensures that the heritage value of the place is maintained.
- 14) Design a new addition in a manner that draws a clear distinction between what is historic and what is new.
- 15) Design an addition that is compatible in terms of materials and massing with the exterior form of the historic building and its setting.
- 16) Add new features to meet health, safety or security requirements, such as an exterior stairway or a security vestibule in a manner that respects the exterior form and minimizes impact on heritage value.
- 17) Work with code specialists to determine the most appropriate solution to health, safety and security requirements with the least impact on the character-defining elements and overall heritage value of the historic building.

- 18) Find solutions to meet accessibility requirements that are compatible with the exterior form of the historic building. For example, introducing a gently sloped walkway instead of a constructed ramp with handrails in front of an historic building.
- 19) Work with accessibility and conservation specialists and users to determine the most appropriate solution to accessibility issues with the least impact on the character-defining elements and overall heritage value of the historic building.
- 20) Add new features to meet sustainability requirements, such as solar panels or a green roof, in a manner that respects the exterior form and minimizes impact on character-defining elements.
- 21) Work with sustainability and conservation specialists to determine the most appropriate solution to sustainability requirements with the least impact on the character-defining elements and overall heritage value of the historic building.
- 22) Comply with energy efficiency objectives in a manner that minimizes impact on the character-defining elements and overall heritage value of the historic building.
- 23) Accommodate functions requiring a controlled environment, such as artefact storage or exhibits in an addition, while using the historic building for functions that benefit from existing natural ventilation and/or daylight.
- 24) Reinststate the building's exterior form from the restoration period, based on documentary and physical evidence.
- 25) Remove a non character-defining feature of the building's exterior form, such as an addition built after the restoration period. - *This would apply to the existing front porch and its roof.*
- 26) Recreate missing features of the exterior form that existed during the restoration period, based on physical or documentary evidence; for example, duplicating a dormer or restoring a carport that was later enclosed. - *Some clues can be found in historic photographs but the information is limited and must therefore be interpreted.*

8.3 Character-defining Elements

8.3a Site

Character-defining Element

The location of the house, and the way its front façade faces Stanley Street, are character-defining elements.

Conservation Approach

Preservation/Subdivision

Description

The project intends to retain the location, front-facing orientation, and setback of the house, and to subdivide the property into two lots. A smaller lot would be located to the west of the house.

8.3b Form, Scale and Massing

Character-defining Element

The form, scale and horizontal massing of the house, as expressed by its two-storey height, steeply-pitched cross-gable roof with dormers, and the multi-planed façades with bump-outs and projecting bays are all character-defining elements.

Conservation Approach

Preservation

Description

The overall form, scale and massing identified as character-defining elements will be retained.

The slight flare at the bottom of the cladding on the north (front) and west façades should be retained as they are important aspects of the house.

Relocation of the house elsewhere on the lot might damage this aspect of the design and should therefore be avoided; however, carefully lifting the house (up to a maximum of two or three feet) would be reasonable provided extra caution is taken to protect these flare elements. If raising the house would mean losing the flares, then they should be carefully documented and replicated afterwards (in terms of design, size, profile and material).

8.3c Roof

Character-defining Element

The cross-gable roof with dormers is a character-defining element.

Conservation Approach

Preservation

Description

The roof and its design will be retained. It was not possible to inspect the condition of the roof for this report, but from the ground the material appears to be in good condition. A qualified person with the proper equipment should inspect the asphalt shingles for wear and tear, damage, and for missing pieces as part of the maintenance routine. It is appropriate to replace the asphalt shingles with new asphalt shingles when required.

8.3d Chimneys

Character-defining Elements

The two internal brick chimneys are character-defining elements.

Conservation Approach

Preservation

Description

The chimney on the east side of the house is a rectangular shape, is comprised of brick in a Flemish garden wall bond style, and has a corbelled chimney cap, as well as a vent. The chimney on the west side of the house is square and comprised of brick in a running bond pattern and is topped with a square chimney pot.

Chimney on east side of the house.

Chimney on west side of the house.

Chimneys are important elements of historic buildings and should be retained; however, the fireplaces (or other uses) they serve do not actually need to be working. In some projects for example, homeowners choose to remove the fireplaces but retain the chimneys. The intention of the current homeowners is to retain both chimneys. The use that each chimney serves is not relevant to this report.

The chimneys appear to be in good condition but should be inspected at some point by a qualified mason who can assess the condition of the overall chimneys as well as individual components such as the bricks, grout, flashing, and whether or not there is any moss growth. The chimney on the west side

of the house, for example, has quite a bit of moss growth and looks as though it could use some fresh grouting.

Any repointing that is needed for the chimneys should match the current in terms of colour, width and consistency. Any new bricks should be of a matching size and colour to the existing. If the flashing needs replacement, ensure that there is a counterflashing. Any moss growth on the chimney should be carefully removed, and if needed, the bricks can be cleaned using a natural bristle brush and a mild rinse detergent. Do not power wash, sand blast or use abrasive cleaning methods.

If either chimney needs to be reconstructed at some point, an accurate record of the existing chimney should be made (photographs, measurements, drawings, location, etc.) so that it can be replicated later.

8.3e Front Porch

Character-defining Elements

A front porch is a character-defining element.

Conservation Approach

Replication

Description

The existing front porch is not the original. At some point in the past, the original porch was removed and replaced with concrete steps and decking. The roof over the porch was also changed at some point. According to historic photographs, the original roof had deep-set eaves and was supported on square wooden posts.

Photo of Alice Travers standing in front of the original front porch, 1921.

Photo courtesy of Heritage Burnaby, Item No. 477-459.

The intention is to replicate the original front porch and add a new roof system to it, while at the same time making it obviously new, so as to meet the principles of heritage conservation.

See next page for drawings.

Portion of west side elevation showing the proposed new porch, courtesy of Rob Johnson, Architect.

Portion of east side elevation showing the proposed new porch, courtesy of Rob Johnson, Architect.

8.3f Exterior Cladding

Character-defining Element

The horizontal wood clapboard siding, with roughcast stucco in the gable ends and on the upper bump-outs are character-defining elements.

Conservation Approach

Preservation

Description

Clapboard:

The side elevations are clad in what appears to be the original clapboard siding with a 4-inch profile and should be retained. The siding is in good condition.

If individual boards become damaged or fail in some way over time, it may be possible to repair or replace just those individual boards. Upon removal, special attention should be given to the condition of the material underneath to determine if there is any water damage or other damage to the underlying material which explains why the board(s) failed. The situation should then be corrected. Any replacement pieces should match the existing in terms of design, size, profile and material. The goal is to avoid the appearance of patching.

Stucco: The stucco appears to be in excellent condition. Regular maintenance of the stucco will be important. Damage tends to occur when water infiltrates the material. Because stucco can be difficult to repair, it is important to hire a professional and skilled plasterer to carry out repair work. More detail is available in the section on Maintenance, but in summary, ensure that repaired or new stucco matches the original stucco in terms of strength, composition, colour and texture.

8.3g Brackets

Character-defining Element

The brackets in the eaves are character-defining elements.

Conservation Approach

Preservation

Description

The triangular wooden brackets in the gable ends on all four elevations, that give the appearance of supporting the eaves, look to be in good condition, but a close-up inspection at some point would be a good idea to accurately determine their condition.

If individual brackets are found to be damaged, first try to repair them. If they cannot be repaired, then they should be replaced with replicas that match the existing in terms of design, size, profile and material. The goal is to avoid the appearance of patching.

As with other original material that needs replacing, look at the condition of the material underneath to determine if there is any reason (water damage, for ex.) which explains the damage. Correct the underlying situation before installing the new brackets.

8.3h Crown Moldings and Friezes

Character-defining Element

The crown moldings (in the north, west and east elevations) and friezes (on all elevations) in the gable ends are character-defining elements.

Conservation Approach

Preservation

Description

The crown moldings and friezes are simple additions to the elevations that provide a quiet yet effective level of decoration and are in keeping with the intention of the Arts & Crafts style.

They appear to be in good condition, but a close-up inspection at some point would be a good idea to accurately determine their condition. As with the brackets and other original material, any elements that are damaged should first be repaired. If they cannot be repaired, then they should be replaced with replicas that match the existing in terms of design, size, profile and material. The goal is to avoid the appearance of patching.

As with other original material that needs replacing, look at the condition of the material underneath to determine if there is any reason (water damage, for ex.) which explains the damage. Correct the underlying situation before installing the new elements.

8.3i Windows

Character-defining Element

The location and fenestration pattern of window openings are character-defining elements.

Conservation Approach

Preservation

Description

The windows appear to be in good condition. Those on the north (front) and side elevations look to be original and have wood casings and wood frames. Many of them have extra detailing below the sills (see photo at right), which should be retained.

The front elevation has the following types of windows:

- a large, triple sash picture window to the right of the front door
- three single, fixed windows on a three-sided projecting bay to the left of the front door
- a small, triple sash window in a small bump-out in the gable end
- a small, triple sash window in the dormer located on the western side of the front elevation
- a small, single window with a multi-pane upper sash on the large bump-out to the west side of the house

The rear elevation appears to have some newer windows as well as what might be original windows, and consist of the following:

- a single, horizontal window with a multi-paned upper sash on the main level of the west side
- a set of three, single, multi-paned casement windows in the middle of the main level of the elevation
- a large, triple, multi-pane window in the gable dormer
- a quad, multi-pane window in the shed dormer

The east elevation has the following window types:

- three, small, square, single windows along ground level
- a medium-sized, triple sash window to the south side of the main level
- a medium-sized, triple sash window and a single window on the bump-out on the upper level

The west elevation has the following window types:

- a medium-sized, triple sash window in the shed bay at the front (north) side of the main level
- two single, side-by-side, windows with multi-pane upper sashes on the main level of the large bump-out
- a medium-sized, double window beside a single window within the same casing on the bump-out on the upper level
- a small, triple window in the gable of the large bump-out

Ideally the location, size, and design of all the historic windows on the house would be retained as they are an important aspect of the heritage value of the house. Unfortunately, due to the requirements noted by the Approving Officer, the setback for the side yard on the west side of the house must be a minimum of 1.5 metres. This has resulted in the percentage of unprotected openings on that elevation being over the allowable as per the BC Building Code, thus necessitating the removal of one or possibly both of the historic windows on the main floor level. Although unfortunate, it is a reasonable solution to a difficult situation.

In this event, the empty space(s) will be made good by installing siding that matches the siding next to it in terms of design, size, profile and material.

If there is concern regarding any of the other historic windows and consideration is being given to replacement, they should first be assessed by a qualified historic window expert in hopes that the window(s) can be retained and restored. Old wood-frame windows can, for example, be given a higher energy efficiency rating through the use of storm windows.

It is important that a company with good experience with historic windows be engaged for any repair or rehabilitation work. Do not engage a company that primarily does reproduction or new windows as they will not have the experience required. The most qualified window restoration companies, in the opinion of this author, are:

8.3j Front Door

Character-defining Element

The location of the front door, and the multi-paned side-lites are character-defining elements.

Conservation Approach

Preservation

Description

It is possible that the front door is original, or at least old. The multi-paned leaded side-lites are most likely original.

The image below is taken from the newspaper story about the Henry Ramsay Residence, located at 7864 Stanley Street, that was in the Province newspaper on June 8, 1912. Note the similarity to the front door on the subject house.

The Province, June 8, 1912, p. 28. Courtesy of Jim Wolf

The design of the door fits within the style of 'two-panel doors' that were typical in the period 1911 – 1930.⁶ The upper panel consists of a 5 over 5 leaded glass windowpanes over a solid wood panel. On the right side, there is a door handle with a large decorative metal plate. The 2 over 9 multi-paned leaded side lites have minimal frames and occupy approximately the top ¾ of the side panels.

Every effort should be made to retain the door and the side-lites. Repair rather than replace. But if replacement is the only option, then ensure that the new elements match the existing in terms of design, size, profile and material.

The experts identified above for window assessments would be qualified to also assess (and repair, if need be) the front door.

⁶ Herbert Gottfried and Jan Jennings. *American Vernacular Architecture: Buildings and Interiors 1870-1960*. W.W. Norton & Company Inc. New York/London, 2009, p. 368

8.3k Colour Scheme

Character-defining Element

The colour scheme of an historic building is a character-defining element. If the original colour scheme can be accurately determined, then it is recommended that it be considered as an option. Other reasonable options are colour schemes that were typical for that type and era of building. In the case of the subject house, the current paint scheme is of good quality and there is no reason to repaint the house at this point.

Conservation Approach

Rehabilitation

Description

When the house requires painting, the current colour scheme may be used, or an investigation can be made into the original colour scheme through scraping (although there is no guarantee that the original colours can be found). Alternatively, the following two-colour schemes provided below would be appropriate.

The brand of paint is less important than the quality of the paint. The proper preparation of the surfaces, and the expertise with which the paint is applied, are critical. For example, ensure that any nicks or other damage to the material being painted has been filled and sanded prior to painting. A professional painter with experience painting historic buildings, in particular wood siding and stucco, should be retained. If the painter suggests replacing any material on the building because it “would be easier” or “look better”, find another painter.

Exterior Colour Scheme

The following colours are from the Benjamin Moore True Colour Palette, but a different paint brand of high quality may be used if the colours below are matched or are very similar. The painter may suggest the most appropriate finish to use.

Option 1:

Element	Colour
Body: Stucco Clapboard Front porch Gutter/downspouts (or a colour that allows them to disappear)	Current colour Similar to: D26-4-0225-0 ‘Roman Ruins’ By Home Hardware Beauti-tone paints A shade darker or lighter would also be acceptable.
Window and door casings Window and door sashes Roof Brackets Roof soffits Crown moldings Friezes	Dunbar Buff (VC-5) Or leave as is
Exterior front door	Craftsman Brown (VC-32) Or leave as is
Roof (asphalt)	Black or dark grey

Option 2:

Element	Colour
Body: Stucco Clapboard Front porch Gutter/downspouts (or a colour that allows them to disappear)	Dunbar Grey (VC-14) A shade darker or lighter would also be acceptable.
Window and door casings Roof Brackets Roof soffits Crown moldings Friezes	Dunbar Buff (VC-5) Or leave as is
Window and door sashes Exterior front door	Hasting Red (VC-30) Or leave as is
Roof (asphalt)	Black or dark grey

8.4 Non-Character-Defining Element

The following is not considered to be a character-defining element.

8.4a Gutters and Rain-Water Leaders

Description

The intention of a gutter system is to convey water away from the building and is an important and necessary feature of the building.

The colour of any new gutters and rain-water leaders should match or blend in with the exterior colour scheme so that they ‘disappear’. The current gutter and rain-water elements are a white colour. Consideration can be given to painting them to match the colour of the cladding at a later time, when the house is re-painted.

9.0 Maintenance Plan

At least once per year, a complete inspection of the inside and outside of the building should be carried out and all deficiencies identified. All repair work should be carried out promptly and according to the *Standards and Guidelines*.

A good rule of thumb is to ensure that each approach or method will not harm or remove any of the character-defining elements identified in this document. If damage to any of the building elements is found, be sure to treat the cause as well as the symptom. For example, if some molding fell off, is it because it was weak from water damage? If so, then determine why the water was able to damage it and take steps to correct it.

Following is a basic, annual maintenance checklist.

Site:

- Keep vegetation, especially plants that are invasive or clingy, away from the face of the building
- Do not plant invasive plant or tree species on the property
- Choose trees that, when mature, will not negatively impact the building
- Ensure that the site is well-drained and/or that run-off is directed away from the building

Foundation:

- Watch for signs of unexpected or significant settlement, deformation, cracking
- Inspect for signs of moisture, efflorescence (white powder on concrete), staining

Horizontal Cladding:

- Inspect wood siding for water damage/ingress, vegetative damage (moss, vines, etc.), insect damage, rot, warping, etc.
- Inspect paint finishes for cracking, peeling, etc.

Stucco Cladding:

- Surface dirt may be removed using a very low-pressure power wash that is then followed with scrubbing with a soft natural bristle brush and the use of non-ionic detergent
- Organic dirt (mold for example) may be removed using gentle solvents that are specifically used for removing organics and dirt
- Care should be taken to clean the surface gently so that none of the stucco surface is accidentally removed
- For more detailed information, see Preservation Brief #22 by the US National Park Service on "The Preservation and Repair of Historic Stucco". <https://www.nps.gov/tps/how-to-preserve/briefs/22-stucco.htm>

Front Porch:

- Check underneath for any signs of creatures

- Look for any signs of water damage, softness, or rot of the wooden elements

Roof, Chimney and Gutters:

- Inspect for loose, missing or damaged roofing material
- Inspect shingles for cracks, blisters or curling
- Remove moss and other vegetative growth
- Check flashing for cracks, holes or looseness
- Inspect grouting and re-point chimney as necessary
- Regularly clean chimney bricks using a natural bristle brush and a mild rinse detergent. Do not power wash, sand blast or use abrasive cleaning methods.
- Inspect soffits for any openings where creatures could get in
- Inspect and clean gutters, checking for cracks and other damage
- Flush downpipes

Windows and Doors:

- Inspect for broken or cracked glass
- Ensure that windows and doors are operating smoothly and properly
- Check the alignment of the doors regularly
- Check all wood casings for dampness, softness and rot
- Inspect weather stripping and replace as necessary

Cleaning of Windows:

From: "Rehab It Right! Historic Windows & Doors", p 17 By the Utah Heritage Foundation, 2011
[www.utahheritagefoundation.com/images/Historic Windows and Doors Property Owners Guide.pdf](http://www.utahheritagefoundation.com/images/Historic%20Windows%20and%20Doors%20Property%20Owners%20Guide.pdf)

To maintain leaded glass windows:

- Dust them occasionally with a soft dry cloth.
 - If that seems to be leaving behind some grime, dampen the cloth with distilled water (soft water.)
- Individually clean each piece of glass before moving on to the next.
- The cloth should be rinsed often or replaced when dirty as potentially abrasive particles may stick to it.
 - Use a cotton swab to clean around the edges of the glass and in the corners.
 - After you finish cleaning a piece of glass dry it with another soft cloth.
 - If you are still seeing a dirty residue, try cleaning using a pH neutral cleaning solution mixed with distilled water.
 - Never use household detergents, abrasives, scouring powders or steel wool scrubbers.
 - Repeat the process on the outside of the window if it is accessible.

Cleaning must be done carefully and correctly. Seek the advice of an expert if you suspect painted areas are unstable. They can give you advice on how to remove surface dirt without harming materials or compromising any decoration.

Gentle cleaning examples include diluted TSP, Simple Green, or D/2 Biological Solution.

10.0 Historic Information

The Arts and Crafts Movement

The subject property was purchased by Arthur Long from his neighbour, Henry Ramsey, sometime around 1914. Both houses were designed by architect Robert Mackay Fripp in the Arts & Crafts style. Mr. Ramsay's house was constructed in 1912 and the subject house in 1914.

The Arts & Crafts Movement began in England in the middle of the Nineteenth Century, in part as a reaction against the negative effects of the Industrial Revolution on society, in particular the increase in mass-produced products (which had both positive and negatives results of course). A key voice expressing concern at the time was John Ruskin (1819-1900) who "believed that the effects of mass production essentially debased the former stature of the decorative arts, and in the process had also done the same bad turn to individual craftspeople"⁷.

The resulting Arts & Crafts Movement was "more an ideology than a style...[and] emerged in England among a circle of artists and architects that centred on William Morris (1834-96) and Phillip Webb (1831-1915)"⁸ who were inspired by Ruskin. Morris, Webb and their followers strongly believed that a building's design must be "appropriate to the purpose for which the building was intended"⁹.

This design philosophy reached Canada at the turn of the Twentieth Century, where local architects enthusiastically designed buildings that were contemporary, appropriate to their location, and that used local materials in a way that supported the crafts.

The Architect

Robert MacKay (sometimes spelled McKay) Fripp (1858-1917) was born in Gloucestershire, England. He moved to Vancouver in 1888 and began an architectural practice that would take him around the world. He was a strong proponent of the Arts & Crafts style and ideology.

A thorough article describing Fripp's life and work can be found on the next few pages. Written by Edward Mills, it is part of "Building the West, The Early Architects of British Columbia", compiled and edited by Donald Luxton and published in 2003 by Talonbooks.

Following the Mills article, is a listing of Fripp's work from the Biographical Dictionary of Architects in Canada 1800 – 1950. (<http://www.dictionarofarchitectsincanada.org/node/1577>)

⁹ Ibid.

R. Mackay Fripp.

**ROBERT
MACKAY
FRIPP**

1858-1917

These influences shaped Fripp's aesthetic views about art and architecture, and imbued him with a lifelong belief in the architect's role as an educator, so much so that in later life he combined his architectural practice with active involvement as a lecturer and organizer of artistic and professional organizations. Following this, in 1879-80 he worked in the office of Sir Horace Jones, London City Architect.

Possibly spurred on by the colourful life of his older brother, Charles, Robert Fripp struck out on a prolonged journey that took him through Europe, South Africa, eastern India, Tasmania and Australia. In 1881 he ended up in Auckland, New Zealand, where he was first employed by William F. Hammond. He later worked as a draftsman for Sir William Fox, and taught architecture classes at the Auckland Society of the Arts. Fripp set up his own practice in Auckland, and on February 27, 1887, married Christine Nichol. In early 1888, he boarded a ship and set off for Vancouver where he met up with Charles. Robert's time in Auckland had been very busy and productive, and he must have had high expectations that this growing new city would provide rich opportunities for an experienced architect. The brothers formed an architectural

Proposed business premises, Vancouver

EDWARD MILLS

In March 1888, a young English adventurer disembarked from a ship on the Vancouver waterfront. Within days of his arrival, R. Mackay Fripp placed an advertisement in the *Daily Herald*, offering his services as an experienced architect and "lessons and instructions in practical drawing and various branches of the building trade." So began the intermittent local career of one of British Columbia's most intriguing early architects. Fripp's life and career epitomizes the unique set of circumstances that existed for young British-born professionals during the High Victorian era. Vancouver represented yet another stop in a journey that began with his departure from London and which would continue with subsequent travels to various parts of the world. Above all else he valued drawing and education, which pulled him restlessly between centres of creativity such as Toronto, London and Los Angeles, as well as to sites of opportunity like Auckland and Vancouver.

Born December 16, 1858 in Clifton, Gloucestershire, Robert Mackay Fripp was one of twelve children of George Arthur Fripp, a prominent English watercolourist favoured by Queen Victoria. His family background included a long line of architects out of Bristol. Two of his brothers, Charles and Thomas, pursued successful artistic careers, the former as a globe-travelling artist-correspondent for London's *Graphic Magazine* and the latter as an important pioneering British Columbia landscape artist and founding President of the British Columbia Society of Fine Art. Following private tutorage with his father, Robert was sent to Berkshire to article in the architectural firm of J.S. Dodd. During his three years in Berkshire, young Fripp was directly exposed to the Arts and Crafts theories of Richard Norman Shaw and William Morris.

partnership, and achieved immediate success, including commercial blocks for A.G. Ferguson, 1888, and Harry Abbott, 1889, but Charles left Vancouver in 1889.

R. Mackay Fripp was a man of diverse interests and strong convictions, particularly with regard to the social importance of art and architecture. His commitment to the aesthetic tenets of the British Arts and Crafts movement extended well beyond his architectural commissions, and indeed his published drawings demonstrated a much higher quality of design than he was able to achieve in this frontier context. He was also one of the few architects in either Vancouver and Auckland to seek RIBA membership. From 1894 onwards, he aired his strongly critical views on the state of art and architecture in British Columbia in a series of letters and articles that appeared in national publications. His adventuresome spirit found him forming an expedition with four friends and native guides to discover the headwaters of the Capilano River in 1890. He

The Bungalow, Vancouver

Ferguson Block, Vancouver

lectured to Chautauqs and various Arts and Crafts organizations on art, archaeology and architecture, and served as founding President of the Vancouver Arts and Crafts Society in 1900. In 1910, he was named a fellow of the Royal Society of Arts. In a dramatic and public split with the B.C. Society of Architects in 1914, Fripp led the breakaway group of ten men

British Columbia Land & Investment Agency Building, Vancouver, 1892

that founded the British Columbia Institute of Architects, the group that ultimately became the current Architectural Institute of B.C.

There were three phases in Fripp's architectural career in British Columbia that were interrupted by work and travel in other parts of the world. His first Vancouver practice began in 1888 and lasted until 1896. During this period Fripp secured numerous commissions from prominent local and absentee investors and businessmen, including two prominent English investors, the Marquis of Queensbury and Thomas Dixon Galpin, the London-based manager of the B.C. Land & Investment Agency.

Although Fripp profited from the early demand for conventional commercial blocks in downtown Vancouver, he found greater opportunity to indulge in his passion for British Arts and Crafts aesthetics through a series of residential and institutional commissions. This began with a half-timbered clubhouse in Coal Harbour designed with his brother, Charles, for the newly-established Vancouver Boating Club, the precursor of the Vancouver Rowing Club, in March 1888.

Shortly afterwards, Fripp acquired a waterfront lot nearby on Coal Harbour, on which he built a modest half-timbered frame house for himself. Fripp's most notable residential designs from this phase were a rambling Elizabethan cottage built for A.J. Dana, the CPR's first purchasing agent, 1889, and *The Bungalow*, built in 1890 for sugar magnate, Benjamin Tingley Rogers, unique in showing the influence of the sprawling New Zealand villa with surrounding verandahs that was common in Auckland.

Fripp entered briefly into a partnership with English-born architect Herbert Winkler Wills (1864-1937). Educated in London, Wills left for New York to work in the offices of McKim, Mead & White and Henry Vaughan in Boston, before returning to London. He next moved to Hong Kong, where he worked in the Public Works department for three years before relocating in British Columbia. In January 1892 Fripp & Wills set up offices in Vancouver and New Westminster, but later that year they submitted separate entries to the competition for the Parliament Buildings, Fripp on his own and Wills in association with **J.G. Tiarks**. The downturn in the local economy by the following year undoubtedly contributed to Wills's decision to return to Great Britain, where he achieved moderate professional success.

Fripp was briefly active in Vernon. W.W. Spinks, Judge of Court for the County of Yale, moved from Kamloops to Vernon in 1892, and commissioned Fripp & Wills to design a grand new home, which he took possession of in April, 1894. In July 1893 the Bank of Montreal commissioned Fripp to design a new branch office in Vernon. Although the building was moved in 1909 and altered, it is still extant. Fripp was also involved with Lord Aberdeen's ranching and orchard investments in the area. Aberdeen's manager at his Guisachan Ranch, Coutts Majoribanks, had a rambling house built by a local contractor in 1891. Aberdeen's solicitor was sent out in 1892 to see why these investments were failing, and expressed his surprise that no architect had been employed on the design

Provincial Home, Kamloops

Bank of Montreal, Vernon

Spinks Residence, Vernon

of the house. When tenders were called late in 1892 for Aberdeen's large jam-canning factory in Vernon, the plans were prepared by Fripp. With all these projects in hand, on July 6, 1893 Fripp announced his intention to open an office in Vernon. These plans never materialized, as the local economy slumped at the time along with the rest of the province.

Fripp's largest commission of the period was the Provincial Home constructed near downtown Kamloops. This rambling institution for "aged, indigent and infirm persons," commonly known as the Old Men's Home, was designed in 1893-94, and opened in 1895. Complete with a large dining room, sitting and smoking rooms, and dormitories, it was set on 320

acres with an established orchard and extensive surrounding gardens. Fripp's first British Columbia phase drew to a close during the economic doldrums of the mid-1890s. Obviously disappointed with what was happening in British Columbia, in 1896 he returned to Auckland, New Zealand where he revived his former practice. He remained there for two years, and his residential work showed a new maturity, such as the shingled Bloomfield House in Parnell that overlooked the Waitemata Harbour. He formed a brief partnership with George Selwyn Goldsboro' in 1898, before sailing back to British Columbia.

The second phase in Fripp's British Columbia career extended from 1898 to 1901 and was divided between

Competition drawing for State Capitol, Olympia, Washington

Victoria and Vancouver. During this period he became increasingly committed to the cause of the Arts and Crafts movement. In his letters to the *Canadian Architect & Builder*, he railed against the mediocrity of prevailing architectural standards in British Columbia. Convinced that it was the duty of architects to elevate public taste in design, he proceeded to found an Arts and Crafts society in Vancouver "based upon similar lines to the now famous Arts and Crafts Society of London, founded by the late Mr. William Morris." Fripp's crusading zeal failed to attract much interest beyond a small circle of English-trained architects and artisans, and his dwindling number of architectural commissions suggests that his strident idealism drove a wedge between him and his prospective clientele. In late 1901 Fripp departed for England. He appeared briefly in Toronto, and his passion for the Arts and Crafts movement was clearly undiminished. This passion led him, in 1905, to strike out for Los Angeles, California, then the centre of the burgeoning American Craftsman movement. He had his office in the same building as **Charles and Henry Greene**, its most celebrated exponents. Fripp produced plans for modest bungalows in the Craftsman style, but also larger residences, including one for Dr. W.T. MacArthur in Los Angeles, 1905-08.

In 1908 he returned to Vancouver to begin the third and final phase of his British Columbia career. By that time Vancouver was on the brink of another major construction boom, and prevailing tastes had moved closer to the aesthetic ideals that Fripp had been championing for a decade or more. Fripp rode the crest of this favourable climate which continued until 1914. His output during this period was prolific and consisted mainly of residential designs which ranged from

modest California bungalows to stately Tudor Revival homes in Shaughnessy and Point Grey. The most intriguing aspect of this phase in his career lay in his introduction of Craftsman design elements to Vancouver. This is especially well-illustrated by the 1910 S.B. Snider residence located in Kitsilano Point, in which the influence of the Greene Brothers is revealed through Fripp's bold use of heavy timber structural elements. This design anticipated the profusion of California bungalows that appeared throughout the lower mainland during the following decade. Commissions from this period include residences in Shaughnessy Heights for F.W. Morgan, 1912; Victor Spencer, 1913; and George Walkem, 1913-14, and in Point Grey a large home for H.A. Stone, 1913. For the South Vancouver estate house, Oakhurst, designed for Charles Gardner Johnson in 1912, Fripp combined river rock and locally cut logs to create an exemplary model of Arts and Crafts design. He also designed a low-slung and still extant bungalow for Henry Ramsay at Burnaby Lake, 1912. For the First Unitarian Church in Fairview, Vancouver, Fripp designed a simple but evocative structure, 1912-13. A prominent apartment block, Grace Court, designed for Dudley D. Hutchinson and built 1912-13, still stands in the West End.

Fripp's legacy of built work exists in three countries. Perhaps the most fascinating aspect of Fripp's career lies in his role as a direct transmitter of architectural ideas which he gained firsthand in England, New Zealand and California, and then introduced into British Columbia. He died in Vancouver on December 16, 1917, and was buried in the family plot in Mountain View Cemetery.

COMPETITIONS

VICTORIA, B.C., British Columbia Parliament Building, 1892. Fripp was among sixty-five competitors who submitted designs in this international competition. His scheme, using his non de plume 'Kismet', was designed in the 'Italian classic style' (Vancouver Daily World, 29 Sept. 1892, 8, descrip.). Fripp was not among the finalists. **F.M. Rattenbury** was later declared winner.

OLYMPIA, WASH., USA, State Capitol Building, 1894 (C.A.B., vii, Aug. 1894, plate illus.). The classical scheme by Fripp was passed over in favour of one by **Ernest Flagg**, but construction of the winning design was halted after two years (H.R. Hitchcock, *Temples of Democracy: The State Capitols of the U.S.A.*, 1976, 226). According to an article in the *New Zealand Herald*, 2 May 1896, p. 6, Fripp exhibited his drawings for the Capitol Building after he had moved to New Zealand, and stated that he had "...won a prize" from among the 185 competitors who had submitted proposals.

AUCKLAND, N.Z., Stock Exchange Block, Queen Street at Mills Lane, 1897. After returning to New Zealand in 1896, Fripp, now in partnership with his former assistant George S. Goldsbro', was one of eleven architectural offices from Australia and New Zealand to submit designs for the four storey block (*New Zealand Herald*, 24 Feb. 1897, 6, report on the competition). Fripp & Goldsbro' received the Second Prize of L 75 Sterling for their effort. The winner was J.A. Barnside of Dunedin, N.Z.

VANCOUVER, B.C., the East End Public School and the West End Public School, 1900. After moving back to Canada in 1898, Fripp was one of ten local architects from Vancouver who submitted designs for two new schools (Province [Vancouver], 21 July 1900, 6). His designs were passed over in favour of plans by **Parr & Fee**, and by **E.A. Whitehead**.

VANCOUVER, B.C., Hotel Vancouver, 1900. Fripp was one of six architects from British Columbia who were invited by the C.P.R. head office in Montreal to submit designs for a new hotel (Province [Vancouver], 15 Oct. 1900, 7). It is unclear who won this competition.

VICTORIA, B.C., 'Cary Castle', the official residence for the Lieut. Governor of British Columbia, 1901. Fripp was one of nine architects from British Columbia who submitted a design for this project, and for his effort he received Second Premium of \$150 for his scheme (*Victoria Daily Times*, 16 Jan. 1901, 2; C.A.B., xiv, July 1901, plate illus.; Peter Cotton, *Vice-Regal Mansions of British Columbia*, 1981, 72). A detailed description of his design was published in *The Province* [Vancouver], 17 Jan. 1901, p. 1. The scheme by **Byrens & Sait** was declared as the winner, but it was never built, and the B.C. Government later gave the commission to **Samuel Maclure** and **F.M. Rattenbury**.

KITSILANO, B.C., St. Mark's Anglican Church, 1910 (Const., iv, Jan. 1911, 61, illus.)

VANCOUVER, B.C., Civic Centre, 1914. The firm of Fripp & Keagy were among 30 architects from the United States and Canada who submitted designs (C .R. [Toronto], xxix, 6 Jan. 1915, 8). **Theodore Korner** was selected as winner, but the scheme was never built.

The House

It is only recently that the design of the subject house has been attributed to Robert Mackay Fripp. This increases the heritage value of the house given that, as noted above, there are only a handful of confirmed Fripp-designed buildings in Burnaby. These are: the subject house at 7828 Stanley Street in 1914, the Ramsay Residence (two houses down) at 7864 Stanley Street in 1912, and the Fairacres Estate buildings in Deer Lake that include the Mansion (now the Burnaby Art Gallery) as well as the Chauffeur's Cottage, the Stables/Garage, the Root House, and the Steam Plant, all in 1910.

The fact that the subject house and the Ramsay house are almost next door to each other adds to the heritage value of both houses, as it is easy for passers-by to appreciate the two similar designs by this great architect. Some of the similarities between the two neighbouring houses include the dominant cross-gable roof, the triangular eave brackets, the bump-outs, the three-sided bay on the front elevation, and the front door with side-lites.

Photograph of 7864 Stanley Street, courtesy of the Heritage Burnaby Website, date unknown.

Photograph of 7828 Stanley Street by the author.

Newspaper advertisements in the Daily Building Record, one dated March 11, 1914 (page 1) and one dated March 14, 1914 (page 1) identify that Fripp was advertising tenders for the construction of the subject house, and that the house was being built for R.D. Travers rather than for Mr. Long.

Building Notice from The Daily Building Record, March 14, 1914, p. 1

The subject building has retained the majority of its original design and materials; but one significant change was the removal of the original front porch and its more modern replacement, done some time ago by different owners.

In the photographs below, it is clear that the front porch is now completely different. The original roof has been removed and the porch posts and picket railing system are gone. The stairs are oriented differently, and it is possible that the height of the two deck levels of the porch might be slightly different as well. In the historic photographs, it appears that there are six or seven risers to the porch's lower deck and at least one more to the upper decking. At present, there are four risers to reach the lower decking and a further three risers to reach the upper decking and the front door. With different landscaping and walkway materials being added over time, this is not much of a surprise.

Photo of Alice Travers standing in front of the original front porch, 1921.

Photo courtesy of Heritage Burnaby, Item No. 477-459.

Photo taken January 2021 by the author.

The roofing system is different as well. Unfortunately, there are no historic photographs that show all of the porch roof as it was, but it clearly had deep overhangs past the edge of the lower deck and was supported by square, likely cedar, posts. These posts were supported in turn by solid, square pedestals that look as though they were clad in stucco. Given that the current porch is concrete, and the original porch was constructed of wood, there is little left in terms of clues as to the size of the original porch. The above historic photograph gives an indication of the size and depth of the original porch and shows that the porch was wider (from west to east) than it is now, seemingly reaching to the far east edge of the house.

It is possible that the brick clad pedestal that is on the lower decking might have been re-used from the original porch, or even left in place, when the new porch was constructed. But this is mere speculation and was more likely new as part of the renovations. Without proof that it is an original component, there is no reason to retain and re-use it as part of this project.

In the photographs below, it is evident that the bump-out on the west side of the front elevation was separate from the front porch wall, allowing the window to be centred on its wall. At some point, when

the front porch was changed, the bump-out was widened to join the new porch wall. Also lost at that time was the flare at the bottom of the siding on the left side.

Bump-out was separate from the porch wall and then filled in later.

*RD Travers in front of 7828 Stanley Street, 1921.
Photo courtesy of Heritage Burnaby, Item # 477-461.*

Flare lost after renovation.

The photograph below is a close-up of the area shown in the photograph above on the right, specifically of the area at which the orange arrow is pointing. It shows the marks of something that has been removed. As this wall would have been new when the bump-out was widened, it is unclear what was here between then and now, perhaps a different roof system?

COMFORTABLE AND ARTISTIC BURNABY LAKE BUNGALOW WHICH IS NOW NEARING COMPLETION

The image contains several architectural drawings. At the top left is a detailed floor plan showing the layout of the bungalow, including a living room, dining room, kitchen, and bedrooms. To the right of the floor plan are two elevation drawings of a window and a door. Below these are more detail drawings, including a cross-section of a door and a window. In the center is a large perspective drawing of the bungalow, showing its gabled roof, verandah, and rustic exterior. The drawing is signed 'Douglas Sutt' and 'Designed by R. MacKay Frupp'.

One of the most charming bungalows to be seen in Vancouver or its environs is nearing completion at Burnaby Lake for Mr. Henry Ramsay. This bungalow is well within the reach of the man of average means, having cost only about \$4000, and was built by Mr. C. G. Bowden.

Its exterior is most pleasing to the eye, having been finished in native timber and very wide rustic cedar shingles. The gables also have two-foot shingles. Exposed solid cedar stained timbers are used for the verandah and roof supports, a rather unique method of building in Greater Vancouver.

On entering the front door a large square hall is seen, which is panelled, and has exposed ceiling joists. This room also contains a large fireplace.

On the right are sliding doors, which lead into the living room. The living room contains a large open fireplace with Welsh quarries and has a comfortable box seat built in beside the fireplace. This room has a beamed ceiling and is panelled.

On the right of the living room there are doors opening on to a roomy verandah, while directly behind is the dining room, reached through a large opening. The dining room is finished in much the same style as the rest of the house and has a built-in buffet as well as hardwood floors and other artistic decorations.

This house contains three bedrooms—all on one floor—this being the true bungalow style of architecture, which will be finished in various light colors to suit the owner. The French windows contribute much to the comfort and attractiveness of these rooms.

This bungalow is entirely modern and has almost perfect kitchen and pantry arrangements. The pantry has all the usual drawers and shelves as well as a fine glazed china cupboard. In the kitchen provision is made for the various pots and pans needed as well as another large glazed china closet. There is a back porch, which contains the refrigerator, which is built in as a part of the house. Mr. R. MacKay Frupp is the architect responsible for this bungalow and has undoubtedly designed one of the most comfortable and artistic bungalows to be seen in the suburbs of Vancouver today.

Plans of the Henry Ramsay Residence, 7864 Stanley Street, Burnaby, BC
 The Province, June 8, 1912, p. 28. Courtesy of Jim Wolf

Historic Photographs

The Burnaby Archives and Heritage Burnaby have a small collection of historic photographs from the Travers family, some of which are taken in front of the house. Tantalizing glimpses of the house are evident in these photographs, but not much of the house can be seen. One cannot help but wishing that the photographer had stepped back a few more paces and/or shot from a different angle!

Below are two photographs from 1921, that show some of the porch:

11.0 General Standards for Preservation, Rehabilitation and Restoration Approaches

The following is taken directly from the Standards and Guidelines.

1. Conserve the heritage value of an historic place. Do not remove, replace or substantially alter its intact or repairable character-defining elements. Do not move a part of an historic place if its current location is a character-defining element.
2. Conserve changes to an historic place that, over time, have become character-defining elements in their own right.
3. Conserve heritage value by adopting an approach calling for minimal intervention.
4. Recognize each historic place as a physical record of its time, place and use. Do not create a false sense of historical development by adding elements from other historic places or other properties, or by combining features of the same property that never coexisted.
5. Find a use for an historic place that requires minimal or no change to its character-defining elements.
6. Protect and, if necessary, stabilize an historic place until any subsequent intervention is undertaken. Protect and preserve archaeological resources in place. Where there is potential for disturbing archaeological resources, take mitigation measures to limit damage and loss of information. (*Note that the Provincial Archaeology Branch must be notified before any work is undertaken if archaeological resources are discovered.*)
7. Evaluate the existing condition of character-defining elements to determine the appropriate intervention needed. Use the gentlest means possible for any intervention. Respect heritage value when undertaking an intervention.
8. Maintain character-defining elements on an ongoing basis. Repair character-defining elements by reinforcing their materials using recognized conservation methods. Replace in kind any extensively deteriorated or missing parts of character-defining elements, where there are surviving prototypes.
9. Make any intervention needed to preserve character-defining elements physically and visually compatible with the historic place and identifiable on close inspection. Document any intervention for future reference.
10. Repair rather than replace character-defining elements. Where character-defining elements are too severely deteriorated to repair, and where sufficient physical evidence exists, replace them with new elements that match the forms, materials and detailing of sound versions of the same elements. Where there is insufficient physical evidence, make the form, material and detailing of the new elements compatible with the character of the historic place.
11. Conserve the heritage value and character-defining elements when creating any new additions to an historic place or any related new construction. Make the new work physically and visually compatible with, subordinate to and distinguishable from the historic place.

12. Create any new additions or related new construction so that the essential form and integrity of an historic place will not be impaired if the new work is removed in the future.

13. Repair rather than replace character-defining elements from the restoration period. Where character-defining elements are too severely deteriorated to repair and where sufficient physical evidence exists, replace them with new elements that match the forms, materials and detailing of sound versions of the same elements.

14. Replace missing features from the restoration period with new features whose forms, materials and detailing are based on sufficient physical, documentary and/or oral evidence.

TOPOGRAPHICAL AND PROPOSED SUBDIVISION PLAN OF LOT 2
DISTRICT LOT 87 GROUP 1 NWD PLAN 20357

Scale 1:200
The intended plot size of this plan is 914mm in width by 609mm in height (Arch D size) when plotted at a scale of 1:200.

All Distances And Deviations Are in Feet And Decimals Thereof Unless Otherwise Stated.
Note: Trees pursuant to by law 1996 are shown

Legend:

- Tree (diameter in mm, measured at 1.3m above ground and Species)
- Inspection Chamber
- Water Valve
- Catch Basin (Square)
- Catch Basin (Round)
- Manhole
- Fire Hydrant
- Power Pole

Suffix:
(T) - Elevation of top of soil

Benchmark Notes:
Elevations Are Corrected (C10282040/2018)
Referenced To Monument 9491302
Monument 1 Deviation: 53.313m

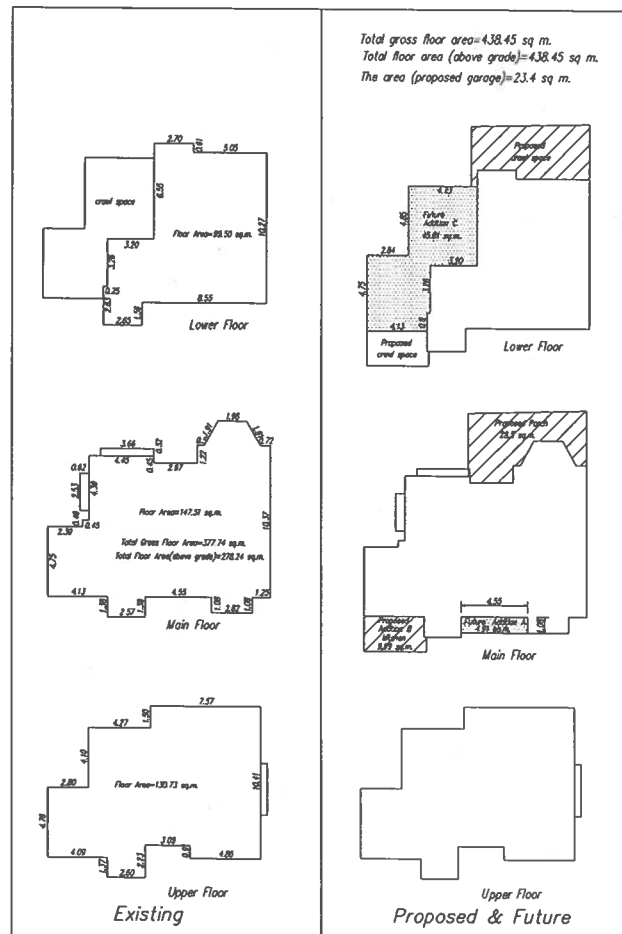

Old bearings are derived from observations between geodetic control monuments 9491302 and 9491404. Lot Elevations are based on site survey.
