Weathered Wood Jumps

Erosion Through Jumps

# Community Engagement

# What We Heard

# What We Heard

Example of jumps eroding.

“ Jumps tend to erode away and become loose due to over dry state. Watering the jump or building lips with wood or asphalt would provide more consistence and better safety. ”

“ Not enough room to get safe speed on the wooden drops. Stone drops are dangerous and too flat. Skinnies are either too easy or too difficult (or decrepit) need better progression. My broke arm falling off elevated pump track. ”

Example of wooden pump track.
